Question #1
As the RAMBOX cargo management system is a Dodge product and I represent a different manufacturer, what alternative cargo management system(s) are acceptable?

Answer #1:
The Rambox was defined in the specifications because that is what Morgan County is currently utilizing. The lockable storage compartments that allow for easy/quick access is the reason for the specification for this application. If you have a similar/equivalent option to the Rambox cargo management it is acceptable to bid, please provide documentation on what system you intend to supply. If you do not have an equivalent system available, please note "not applicable" on the spec line for the box and list it in the exception to bid segment.
