2021 vs. 2024 IECC & Code Adoption Discussion

May 8, 2025

Mark Arndt Event Center

718 Ellsworth Street, Brush, CO 80723

8am - 12pm: The morning session will focus on the differences between the 2021 and 2024 International Energy Conservation Codes (IECC), as well as understanding how upcoming legislation might require adopting one of them sooner than later. We will also talk about the Colorado Model Electric-Ready and Solar Ready Code that may need to be adopted too. The session is open to everyone so please come to understand what is ahead of us for new construction in Colorado.

12:00-1:00 pm: Lunch provided

1:00 - 4:00pm: The afternoon session will focus on how the code adoption process works, what amendment packages might work if we need to adopt these codes, and how to build up the workforce that will be required to implement it all. This session will be more of a discussion than a presentation so please come prepared to help find solutions if we in fact do move forward, meeting the requirements of these State statutes. Let's also discuss if jurisdictions can all move forwards together on a common code edition with possibly similar amendments.

Please pre-register so that we know how many lunches to provide.

Registration Required:

Shaunna Mozingo
